

Finger Pulse Oximeter

The John Bunn ® DigiO₂ Finger Pulse Oximeter combines a sensor and monitor in one convenient device. The DigiO₂ measures pulse oxygen saturation value (SpO₂), pulse rate value (PR) and blood perfusion index (PI) or pulse strength, in home or clinical settings, for both adult and pediatric patients. Features include a bright, easy to read LED with multi-directional displays that enable the user to read results from any angle and audible and visible alarms and low-voltage indicator. The small, lightweight unit is powered by two AAA batteries that provide approximately 2,000 spot checks between battery replacements.
