

## Instrument Management Solutions

The Instrument Management Solution from STERIS allows users to manage reprocessing cycles down to the instrument level. The system provides detailed, accurate information and control over marked instruments as they move through the reprocessing cycle. Instrument Management Solution controls count sheets, manages trays and employs barcodes to allow management of individual instruments. It can also track and manage the repair and maintenance schedules of instruments and instrument sets. Also, utilizing wireless scanning technology, touch screen interface and a vendor-neutral system, Instrument Management Solution is very easy to use.
