

## Microbial Sealant

KIMBERLY-CLARK InteguSeal Microbial Sealant has a unique mechanism of action that does not promote bacterial resistance and does not need to be removed for suture or closure. Easy to apply and fast-drying, this microbial sealant can be used with a variety of patient skin preparation treatments and surgical products such as electrocautery, sutures, staples and wound adhesives. The versatile film bonds to skin surfaces with different curvature, hair-content or amount or types of flora present.
