

Headlight Video Imaging System

The BFW™ parallax free Thru-the-Lens Headlight Video Imaging System provides high quality digital images in a single-chip headlight video camera. This innovative technology is now available with BFW's Maxenon Xi 300-Watt Xenon light source, offering more dependable and powerful illumination. The Headlight Video Imaging system is available with its own tower cart including a monitor, DV-Cam Deck or CD-R writer, and informational software that will provides users with the ability to create a written report on cases, and attach still and video digital images to the importable report.
