## High Definition Video Recorder

Sony's PDW-70MD XDCAM® HD recorder captures and stores high-definition video of medical procedures in 1440 x 1080i resolution. The device can record and store up to two hours on a 23GB PFD-23 XDCAM disc, which is sealed to help prevent scratches and preserve data with minimal degradation for more than 50 years. Integrating a 3.5-inch color LCD screen, this recorder allows users to view thumbnail-sized stills of footage accessible through random access memory, thus enabling them to quickly identify points of interest without manually winding through hours of footage.
