

Infection-Control Keyboard

Advanced Input Systems has developed a line of infection-control keyboards for medical environments to address studies that have shown keyboards to be a significant source of bacterial cross-contamination. The Cart Sized Medigenic® 101 Compliance Infection-Control Keyboard is the latest in the series that uniquely helps monitor its own cleaning status to safeguard both patient and staff. Conventional keyboard tactile response allows for high speed data entry while the flat design enables quick cleaning with hospital-grade disinfectants.
