

## Surgical Headlight & Light Source

The White Sun® Surgical Headlight provides brilliant illumination at a fraction of the size, weight and price of most other headlight systems. An optical weight of only 44 grams and a 3.0-mm fiber cable allow the operator to use the headlight during long procedures without neck or back fatigue. The White Sun® Xenon Light Source provides illumination that is extremely bright and cool. The Digital LED readout eliminates the guess work in trying to find the surgeon's desired illumination output. The light source comes with a complete three-year warranty and a 1000-hour lamp life warranty.
