

Surgical Instrument Lines

?

Black & Black Surgical has introduced several new major surgical instrument lines. Relying on integrated relationships with precision German manufacturing organizations, Black & Black Surgical features the finely fused tungsten carbide jaw inserts of the Onyx™-line of scissors, needle holders and forceps, along with the comfortable yet versatile In-Line Ergo Style handled endoscopic forehead and facelift instruments. Other categories include the uniquely sharp NexEdge™ rasps and osteotomes and the compact technology of digital video camera/light source. In addition, Black & Black Surgical is the exclusive North American distributor of Stille® SuperCut scissors. The company has also introduced Corina, a full skin care line that is nutritionally formulated. It uses the Infusiderm Delivery System™ allowing nutrients, antioxidants and anti-aging peptides to penetrate beyond the corneal layer of the skin.
