

## Suturing Devices

SuturTek's family of 360°™ suturing devices enables surgeons to deliver perfect stitches every time in minimally invasive and conventional open surgery using standard curved needles and standard sutures. The innovative 360° devices replicate standard closure technique, allowing surgeons to easily, quickly and safely place all standard types of running or interrupted stitches. The SuturTek Endo360° minimally invasive device enables laparoscopic and minimally invasive surgeons to easily place stitches and tie intracorporeal knots. The battery-powered SuturTek 360° Sternal Closure Device™ easily places standard sternal wires with the push of a button. The 360° Fascia Closure Device™ prevents suture needlesticks, the leading cause of sharps injury in the OR.
