

Bariatric & General Surgery Table

The TRUMPF TITAN is a modular, split-leg, fully-articulating universal surgical table with a 1,000-pound patient weight capacity. It features motor driven mobility and easy movement with six-inch dual castors. TITAN offers 40-degree Trendelenburg and reverse Trendelenburg positioning and 25-degree tilt, maintaining stability even at extreme angles at full weight capacity. The TITAN's 12-inch longitudinal slide, 100-percent C-Arm access, head-to-toe X-ray channel and optional carbon fiber components provide superior intra-operative imaging capability. Like all TRUMPF tables the electro-mechanical TITAN is hydraulic free.
