

Battery-Operated Digital Scales

?

The Models 6202 and 6202D STOW-A-WEIGH Scales mount snug against the wall and protrude a mere four inches when not in use. They are designed for stand on weighing, wheelchair patients and will even accommodate patients on stretchers. The scales are particularly well suited for high traffic areas or where floor space is limited. These battery-operated digital scales automatically turn on and zero when the platform is lowered and shut-off is automatic. Plus, with weighing platforms a mere 1½ inches high, patient access is easy and convenient.
