

Bladeless Laparoscopic Access System

Booth # 1329 • The VersaStep™ PLUS 15mm is a bladeless laparoscopic access system with a radially expandable sleeve that minimizes the fascial defect and reduces the downward insertion forces associated with normal trocar insertion. This device is an innovative addition to the existing VersaStep PLUS line and offers all of the benefits of Covidien's proprietary STEP™ technology. The new VersaStep PLUS 15mm will primarily be used in advanced minimally invasive abdominal and thoracic surgeries that require the use of larger sized instruments. This trocar's excellent fixation allows the surgeon to concentrate on the surgery, not the access device.
