

Cholangiography Catheters

Booth # 939 • Ranfac's line of Cholangiography Catheters eliminates the need for secondary instruments to advance or thread plastic tube-type catheters into the cystic ducts. The catheters provide easy insertion into the smallest of cystic ducts with no worry of collapsing the catheter during clamping. An innovative tapered bead on the tip prevents the catheter from backing out of the cystic duct once the clip has been applied and also helps to prevent extravasation during injection.
