

# Safety Percutaneous Guidewire Introducer Needle

The SP pro Safety Percutaneous Guidewire Introducer Needle meets OSHA guidelines for sharps with engineered sharps protection. This needle would replace the standard 18 Gauge 2<sup>3</sup>/<sub>4</sub>-inch introducer needles commonly sold to the Cath Lab and Special Procedures/Interventional Radiology. They are used in every Cath Lab and Interventional Radiology procedure to gain access to the femoral artery so that a guidewire can be introduced through it. The SP pro Safety Needle incorporates a plastic handle that is advanced from the hub of the needle to permanently cover the tip of the needle.
