

Equipment Booms with Ambient Lighting System

TRUMPF has expanded its line of accessories for the OR and ICU with its new AmbientLine. The environmental and task lighting system uses indirect LED ceiling and floor lights, integrated into TRUMPF Equipment Management Systems, to aid the patient's feeling of well-being and improve working conditions for clinicians with relaxing atmospheric lights. In the OR, AmbientLine's ability to vary lighting colors is especially useful for minimally invasive surgery. TRUMPF Equipment Management Systems for the OR and Critical Care environments include single and tandem arm solutions and innovations such as TRUMPF Vertical Articulating arm, capable of lifting a 400-pound anesthesia machine.
