Glucose Test Strips

The StatStrip™ Glucose Test Strip for bedside glucose testing incorporates a patented strip technology that uses four measuring wells. Current glucose strips use only a single well. Nova's Multi-Well™ system measures and corrects hematocrit interference as well as interferences from acetaminophen (Tylenol), uric acid, ascorbic acid (Vitamin C), maltose, galactose, xylose and lactose. StatStrip also eliminates oxygen interference to provide accurate glucose results regardless of the sample's oxygen status.
