

Bariatric Bean Bag Positioner

These Gel BeanBag (Vacuum-Pac) Positioners feature an integral soft layer of Blue Diamond Gel that conforms to the body and distributes the patient's weight uniformly, thus ensuring the maximum protection available to help prevent pressure points. Easy to connect to and disconnect from the wall suction line, the valve system is replaceable if compromised. The positioners are available in a standard size and 46-inch by 46-inch bariatric size, both with U-shaped shoulder cut-outs.
