## Nitrile Exam Gloves

The KC100 Lavender Nitrile Exam Glove is a superior alternative to vinyl gloves in barrier protection, performance and comfort. These gloves keep hands cooler, create less hand fatigue and yield significantly more tactile sensitivity and hand movement. Lavender Nitrile is a thinner, lighter and more economical choice compared to standard nitrile, yet retains the protective properties required for a wide range of tasks such as dispensing general medications, routine oral care and non-invasive general physical examinations.
