

OR Lighting & Camera System

The TRUMPF iLED 5, iLED 3 and new TRUMPF TruVidia HD in-light high definition camera have been combined to create an advanced, flexible and feature-rich surgical lighting and camera system. In addition to traditional LED advantages such as low heat and dramatically long life cycles, the iLED 5 offers 160,000 Lux of illumination, a superior homogeneous light field, virtually shadow-free deep-cavity illumination and adjustable color temperature (four settings), providing optimal contrast and satisfying varied surgeon preference. Hospitals can use all iLED 5s or choose the iLED 5 and iLED 3 combination. Plus, the addition of the TruVidia HD camera allows surgical teams to capture and transmit razor sharp, brilliant, true-to-life images with 1080 line resolution and two million pixels.
