

Advanced Radiology Desk

The Carl's Table® Model CT08 is an advanced radiology desk for reading soft copy and for teleradiology applications. This ergonomic desk features motorized height movement and quick leg speed adjustment from 28.5 to 48.5 inches. The electric tilt adjusts from zero to 15 degrees to facilitate all individual work positions. The CT08 holds up to four monitors on arms, while its Monitor Control System™ electronically moves the monitors in tandem forward/backward and up/down with the touch of a button. Monitors are mounted to a rail and actuators control the up/down and in/out action. The tilt for each monitor can be adjusted manually.
