

Device Transfer System

The TranSTAT™ Device Transfer System provides a safe, ergonomic way to transport critical equipment with a patient throughout the hospital environment. The system can carry up to 100 pounds of equipment and supplies and accommodates a variety of devices. It can be transferred between Harmony® equipment management systems and Stryker and Hill-Rom beds. No trolleys or additional wheels are needed, and no lifting is required to accomplish load transfer. The system incorporates many features that promote patient and staff safety.
