

Antimicrobial Instrument Cleaning Brushes

Spectrum's stainless steel wire-twisted cleaning brushes are now produced using antimicrobial nylon bristles. Designed to protect hospital staff, the new antimicrobial bristles resist bacterial growth and offer superior infection control properties. Because the brushes resist bacterial growth, they do not break down, providing a longer useful life. Spectrum offers a complete range of surgical instrument cleaning brushes with diameters measuring as small as 1.0 mm and as large as 15.0 mm, with lengths ranging from eight to 31 inches. Spectrum also offers complete brush kits to cover all surgical instrument cleaning needs.
