

Carbon Fiber Surgical Table Accessories

This full line of radiolucent Carbon Fiber components including whole table tops, arm and leg extensions and skull and spine attachments. All Carbon Fiber components enable superior and unrestricted intraoperative imaging. These components use TRUMPF's patented universal coupling point system, which allows for the easy exchange of modular components so every TRUMPF table be configured with the right components to meet the needs of virtually any surgical discipline. The Carbon Fiber components have important applications in general surgery where intraoperative imaging is in increasing demand as well as in hybrid rooms. The TRUMPF JUPITER System Table and Carbon Fiber table top are integral parts of imaging systems including the BrainSUITE iCT.
