

# Insulin & Tuberculin Safety Syringe

The Magellan® Insulin and Tuberculin Safety Syringe is a needle-based safety solution that improves clinician efficiency and maximizes protection. This latest addition completes the System of Magellan Safety Products that includes hypodermic, insulin, tuberculin, and phlebotomy products. Each Magellan product includes many innovative features, including a robust safety shield that covers the entire needle, integral safety design, clear unobstructed graduations and a choice of easy, one handed activation methods. The Magellan Safety Products also feature bevel orientation, so that if the safety shield is up, the needle bevel is up. This innovative line of safety products creates one safety standard for protection throughout the entire facility.
