

Mobile Surgical Table System

The TRUMPF JUPITER Mobile System Table (available in Fixed Column and Mobile System versions) uses interchangeable table tops to help reduce non-operative time and maintain OR schedules through parallel processing. Interchangeable table tops and a trolley system allow the patient and table top to be brought into the OR together and placed on the electro-mechanical center column. At the end of the procedure patient and table top are removed on the trolley and the next patient and table top are brought in via trolley. JUPITER features split leg, full range of motion, dual articulating headrest, 100 percent C-arm access, 12-inch longitudinal slide, 40-degree Trendelenburg & reverse Trendelenburg, 25-degree tilt and hydraulic-free operation.
