

Sterile Wound Dressing Drape

The Versa-Drape® with Drape 'N Dress is designed for quick, easy and efficient application of sterile wound dressing before breaking the sterile field. The innovative Drape 'N Dress feature delivers a procedure specific sterile wound dressing on the surface of the surgical patient drape near the procedure site. This allows for instant access to just the right wound dressing for immediate sterile application when a procedure is completed. Since the dressing can now be applied before removing the procedure drape, risk of exposure to infection is reduced while speed and efficiency are increased. VersaDrapes with Drape 'N Dress are available in multiple configurations and sizes for a diverse range of specific procedures.
