Waterproof OR Table Pad

FREEDOM is a waterproof OR table pad made for the AMSCO 1080/2080 surgical tables. The table pads combine a layer of 1.5-inch T-Foam with an underlying half-inch base layer of firm sponge for maximum pressure management and support. The firm sponge prevents the pad from bottoming out. A seamless, waterproof membrane coating conforms to the T-Foam to uniformly contact and support the patient's body, relieving pressure on bony prominences. AliMed also offers a vast collection of other tablepad models.
