

Cordless Surgical Headlight System

The FireFly Infinity Ultra Surgical Headlight System delivers bright, shadow-free illumination with unrestricted mobility that enables users to work with precision. At over 7,500 foot candles (81,000 lux) of light, the Infinity's LED easily outperforms other conventional lights, but with no bulbs to replace. Unlike tethered systems, the FireFly Infinity Ultra's portability allows patient access from any position. The headlight system includes a state-of-the-art lithium-polymer 6+ hour battery, plus a loupe (as shown) or a headband mount.
