

Monofilament, Large-Pore Surgical Mesh

GORE INFINIT Mesh is a 100 percent monofilament, large-pore knitted surgical mesh constructed entirely of polytetrafluoroethylene (PTFE). The combination of the chemical inertness of the PTFE polymer in a large-pore structure of GORE INFINIT Mesh offers surgeons and their patients advantages over polypropylene and polyester meshes. The product is engineered to minimize foreign body reaction and maximize long-term patient comfort and quality of life with performance that lasts.
