

Electrotherapy Units

AliMed has expanded their electrotherapy line with three new electrotherapy units to pair with their ProStim® electrodes. This expansion helps AliMed offer a more complete electrotherapy selection. These units offer features well beyond their modest price-point and allow users to administer a higher level of care than similarly priced products would allow. All units feature dual-channels and come complete with a timer, four reusable electrodes, two lead wires, batteries, an instruction manual and a protective storage case.
