

HD Surgical Display & Transmitter

The WiSe® HDTV Flat Panel Monitor represents the first wireless 1080p flat panel in the medical field. The monitor, combined with the WiSe HDTV Transmitter, brings optimal resolution, brightness, and optical clarity to the OR. Uncompressed 1080p is transmitted wirelessly to eliminate cable clutter and potential costly repairs to flat panels. Token Keys create unique codes between monitor and transmitters to protect wireless signal quality from interference with other OR devices.
