

High Performance Foot Orthotic

The Sher-Sport[®] high performance foot orthotic is designed for maximum protection and cushioning in high impact environments. Ideal for individuals who are very active or who remain on their feet for the majority of the day, the orthotic offers high energy return after absorbing the high impact from each heel strike for an "extra" spring. The Sher-Sport is high rebound polyurethane and the top cover is treated with Sroufe's Anti Microbial Polyester fabric, which increases product life and reduces odor. The forefoot area is very thick and is ideal for shoes with a large toe box such as sneakers or work boots.
