

Sonic Irrigation For Advanced Cleaning

Medisafe adds the SI-PCFTM floor model, auto fills, drains and rinses to its line of Sonic Irrigation equipment, which is designed for cleaning difficult cannulated, lumened instruments. The systems use powerful ultrasonic action to remove stubborn debris, enzyme injection into cannulated instrument core to breakdown hidden debris, and a continuous flush of cannulated instrument lumens to remove all debris. The SI-PCF also offers:

- Testing and validation for cleaning da Vinci®, EndoWrist® instruments, ConMed DetachaTip® instruments and BOSS ClearFlush instruments.
- Use of the same critical cleaning parameters as a manual cleaning method, but with the ability to reprocess multiple instruments simultaneously in saving time and labor.
