

## **Innovative Endoscopic Stapler For General And Thoracic Surgery**

The **Surgical Devices business unit of Covidien** introduces the Duet TRS<sup>®</sup> reload with tissue reinforcement. The new product offers:

- Preloaded tissue reinforcement on the Endo GIA<sup>®</sup> Universal range of laparoscopic staplers.
- A synthetic absorbable polymer reinforcement material that is preloaded on each SULU.
- Proprietary fixation of the reinforcement material keeping it flat and secure during placement and manipulation on the tissue.
- Reinforcement material and anchoring sutures that secure the material are made of Biosyn<sup>®</sup> polymer.
- The ability for the absorbable material to retain measurable mechanical strength through 14 days and for absorption to essentially complete between 90 and 110 days.
