

OR Table Accessory Rail Clamp

A new rail clamp features a handle with a special rubber coating and ergonomic shape to make tightening accessory clamps easy

Innovative Medical Products introduces the EZ GRIP™ --an operating room table accessory clamp that is easier to tighten, and stay tightened. According to the company, features include:

- Easy tightening power made possible by its handle's rubber coating and diameter shape, enabling OR personnel to lock down accessories with more force.
- Availability in a bright green color for quick, easy identification in the OR environment.
- The ability to accept both round and flat end accessory bars for vertical placement, as well as horizontal extension flat end bars.
- Enough space in the "jaws" of the clamp to accomplish these different configurations.
- Especially designed to accept IMP hip and shoulder positioners, but also has the ability to accept most other manufacturers' accessory bars or adapters that have flat or round designs.
