

## **Gloves Offer Protection, Minimal Latex Allergy Concerns**

**Esteem® with Neu-Thera® surgical gloves are sterile polyisoprene powder-free surgical gloves with an emollient coating**

November 10, 2009

Cardinal Health's Esteem® with Neu-Thera® surgical gloves provide a single solution to protect hands, minimize latex allergy concerns and promote skin wellness. According to the company, the Esteem® with Neu-Thera® surgical gloves feature:

- Synthetic polyisoprene, which is structurally identical to natural rubber latex but does not contain the proteins that rubber latex does, allowing health care workers with known sensitivity or allergy to latex to wear a glove that performs like latex in terms of comfort, fit and feel.
- The Neu-Thera® emollient coating, providing a convenient and effective agent to aid in skin wellness and to encourage compliance with hand washing and surgical hand antisepsis guidelines.
