

## Intraoperative Fluid Control Device

The Promethean Fluid Control Island® System is a patented, proactive device designed to capture and contain fluids lost from the patient and instrumentation during scope procedures. The product is a combination drape and collection vessel that rests on the floor, uses existing hospital wall suction and immediately evacuates fluids for measurements before they hit the floor. Additional features include:

- The ability to reduce the risk of patient fluid overload, OR staff slips and falls, and cross-contamination.
- Availability in a variety of sizes for a variety of procedures, including Orthopedics, OB/GYN, Urology, Wound Care, Lithotripsy and Plastic Surgery
