

Microbial Sealant For Surgical Sites

Kimberly-Clark InteguSeal* Microbial Sealant has a unique mechanism of action that immobilizes dangerous pathogens including MRSA on the surgical site that preps and incision drapes can leave behind. According to the company, the sealant features:

- Easy application and fast-drying.
- The ability to be used with a variety of patient skin preparation treatments and surgical products such as electrocautery, sutures, staples and wound adhesives.
- Availability in 3 sizes.
- The ability to provide a suitable option for locking skin flora out of any surgical site, from the smallest incisions to full, open-chest procedures.
