## Reusable Safety Scalpel

For hospitals and surgical centers aiming to minimize accidental scalpel cuts, needle sticks, and other such hazards in the OR, Advanced Medical Innovations (AMI) introduces its Safe Sharps Management product line, which includes the Reusable Saf-T-Scalpel™. This reusable safety scalpel is identical to the standard scalpel handle used routinely in surgery with a thin metal guard to cover the blade while passing it to the surgeon within the Neutray™. Additional features include:

- The ability to be reused.
- The ability to be sterilized by autoclaving.
- The ability for the disposable blade to be safely removed hands-free by the guard for secure disposal in the Sharps Safety Station™ box.
