

Twist-N-Load Instruments

Gauthier Biomedical introduces a new line of specialized surgical instruments with their innovative Twist-N-Load Connection System. The company says that with the Twist-N-Load, users don't have to pull back on any collar, or push a button to begin the connection process. With a simple twist of the wrist, the shaft quickly locks into place providing an instrument with extreme integrity and zero "play."

Additional features include:

- Ideal for users who may require multiple connection changes, or simply want the convenience of an almost immediate, quick and sturdy connection.
- No parts required to be screwed together, connection is "ready to go" with a simple twist and subsequent "click."
- Availability with Gauthier Biomedical's entire line of ratchets, screwdrivers and revolutionary, all-in-one instrument, the RTL (Ratcheting Torque Limiter) Driver.
