

Trocars For Single-Incision Laparoscopy

The 5mm AnchorPort® disposable trocar from Surgiquest is available in a Bladeless, Optical Tip configuration which accommodates a 5mm laparoscope within the clear tip obturator channel to provide surgeons with visualization during abdominal access. The AnchorPort® disposable cannulas are also available for use with the same disposable obturator during a surgical procedure on the same patient when multiple cannula applications is desired. Features include:

- The ability for each elastomeric cannula to self adjust to the patient's abdominal wall thickness to anchor the cannula in place and to provide operative maneuverability.
- Availability in an ULTRA LOW PROFILE LONG (APC5LU) configuration that comes in a smaller diameter cannula housing without the Luer-Lock port.
