Surgical Prep Razor

The DermaGard™ is a heavy-weight surgical prep razor featuring combs that lift and separate hair. The razor is manufactured with high quality Comfort-Coated® stainless steel blades that provide a smooth, clean shave. The blade is uniquely wrapped with foil to guarantee that it never touches the skin. This feature allows the razor to run smoothly over bumps without causing nicks, cuts or chafing, thus reducing the chance for surgical site infections (SSI). Each of DermaGard's distinctive characteristics work together to provide safe preoperative hair removal and a closer shave than clippers.
