

Endoscope Holder

During laparoscopic procedures, stability is critical. Yet, most endoscopes are held manually and often for long periods of time. The EnView™ from CareFusion, provides an elegant solution to the challenges of manually holding the endoscope while providing a stable image throughout the case. Benefits include:

- The ability to integrate with existing visualization equipment.
- The ability to free assistants to perform other surgical tasks.
- A unique clamping system that provides flexibility to place EnView™ with little or no workspace interference.
