

Sterilization Catalog

AliMed® inc announces the release of its new Sterilization catalog featuring Medline sterilization products. The 24-page catalog covers the entire sterilization process, including products needed for decontaminating, lubricating, prepping, packing, and monitoring surgical instruments.

Medline offers completely reusable sterilization containers, which completely eliminate disposable filters and wraps. The company also offers sterilization containers with ThermoLoc® technology, an intelligent locking system that eliminates the need and cost of plastic locks required of most other container systems. ThermoLoc is a heat-activated red bar that automatically locks the lid latch in place during the sterilization process and creates a tamper-evident seal.

In addition, *Sterilization* features everyday items such as scalpels, forceps, scissors, accessories, carts, and shelving—all rounding out the product selection with items typically used in conjunction with sterilization equipment.
