

## Tissue Dissection Device

PEAK Surgical, Inc. offers the PEAK® PlasmaBlade TnA (Tonsil and Adenoid) tissue dissection device, indicated for cutting and coagulation of soft tissue during otolaryngology (ear, nose and throat [ENT]) surgery, including removal of the tonsils and adenoids. The PEAK PlasmaBlade™ is a family of disposable, low-temperature surgical cutting and coagulation devices that offer:

- The exacting control of a scalpel and the bleeding control of traditional electrosurgery without the extensive collateral damage to surrounding tissue.
- The PULSAR® Generator, which provides pulsed plasma radiofrequency energy to the PlasmaBlade to incise tissue and control bleeding
- Clearance for use in the United States in general, plastic and reconstructive, ENT, gynecologic, orthopedic, arthroscopic, spinal and neurological surgical procedures.
