

## FloShield™ Laparoscopic Technology

CareFusion now distributes Minimally Invasive Devices, Inc.'s FloShield™ product line for laparoscopic surgeries. CareFusion is the exclusive external distributor for FloShield and will market and sell the products alongside its own line of V.Mueller® and Snowden-Pencer® surgical instruments. According to the company, FloShield is a device that addresses several of the top issues surgeons face when performing laparoscopic surgery. Specifically, the product helps keep the laparoscope lens free from debris and fog during surgery, helping to greatly reduce the need for surgeons to remove and clean the lens, leading to reduced surgery time.
