

Skin Prep Swab And Swabsticks

PDI, Inc.'s Chlorascrub™ is a 3.15% Chlorhexidine Gluconate (w/v) and 70% Isopropyl Alcohol (v/v) solution that guards against pathogens like most bacteria, fungi/yeast and viruses, making it a choice for pre-operative and pre-injection skin preparation. The solutions comes in a swab, swab stick and maxi swabstick. According to the company, features of the swab include:

- Pre-injection skin preparation
- Achieves $>2 \log_{10}$ in 30 seconds and maintains 2 \log_{10} bacterial reduction for at least 24 hrs.
- Easy-to-use prep pad design covers a 6.25 square inch treatment area

Features of the swabstick include:

- Pre-operative and pre-injection skin preparation
- Achieves $>3 \log_{10}$ in one minute and maintains a $>3 \log_{10}$ bacterial reduction for at least 24 hours
- Square, flat-shaped applicator design allows for better skin contact particularly in moist skin areas
- Peel-apart packaging ideal for use in sterile environments

Features of the Maxi Swabstick include:

Skin Prep Swab And Swabsticks

Published on Surgical Products (<http://www.surgicalproductsmag.com>)

- Pre-operative and pre-injection skin preparation
- Achieves >3 log₁₀ in one minute and maintains a >3 log₁₀ bacterial reduction for at least 24 hours
-

- Round, flat applicator design for larger area pre-operative skin preparation
- Peel-apart packaging ideal for use in sterile environments
