

## Esteem® Ortho Surgical Gloves

The Esteem® Ortho Powder-free Surgical Glove from Cardinal Health is a synthetic solution that performs like a latex glove in terms of comfort, fit and feel. It is made from a unique synthetic polyisoprene formulation that is structurally identical to natural rubber latex without the proteins.

The glove is designed for high risk procedures in areas like labor and delivery, trauma or reconstructive surgery where a thicker barrier is required. It can be worn as a stand-alone, when a single layer of protection is preferred, on top of Esteem Blue surgical gloves with Neu-Thera® emollient coating for double gloving or as the base layer of double glove protection with Esteem Micro or Esteem SMT powder-free synthetic polyisoprene surgical gloves as the top layer.
