

## Surgical Instrument Tray Corner Guards

Spectrum Surgical Instruments Corp. introduces their surgical instrument tray corner guards. The corner guards protect trays from rips, holes, and tears in sterilization wrap due to sharp tray corners. Made of silicone, the open cell structure allows air to circulate freely and the elevated height gives your trays space to help circulate air. The highly visible pink color stands out against blue wrap. Sold in packages of four, Spectrum's Tray Corner Guards are gas, steam, Sterad®, and Ozone compatible.
