New Apple App For HD Video

Leica Microsystems, in partnership with Med X Change, introduces a new Apple® app called Med X Mobile. The application enables surgeons to wirelessly transfer HD video and still images of surgical cases directly from a Leica Microsystems surgical microscope to an Apple® iPhone or iPod with no need to connect to a personal computer. Surgeons are able to transfer surgical videos directly from the Med X Change HDMD™ recording unit to the surgeon's Apple® device immediately upon procedure completion. The HDMD™ is integrated with all Leica Microsystems' surgical microscopes.
